## TW-README.TXT

### 1U(Taiwan)

Taiwan ENC's named using "1U" prefix and distributed via PRIMAR in S-63 format are official electronic navigational charts produced by Taiwan ENC Center, Ministry of the Interior (MOI), issued by MOI for navigational use.

For ships navigating in the coastal waters or entering ports of Taiwan, only these ENC's from Taiwan may be used with ECDIS to meet the chart carriage requirement as imposed by the SOLAS convention.

Taiwan ENC's are produced based on the most recent hydrographic surveys and data sources, including those from the National Land Surveying and Mapping Center of MOI, the Naval Meteorological and Oceanographic Office (NMOO), the Maritime and Port Bureau (MPB), and port authorities.

It should be noted that the appearance and content of Taiwan ENC's may differ substantially from those in NMOO's paper charts and charts compiled from them.

ECDIS systems use IHO S-62 List of Producer Codes to identify the source of ENC's and manage chart data. Considering the difficulty in updating the S-62 list coded into ECDIS systems onboard vessels, Taiwan ENC's are issued using the code already listed in S-62, the "1U (7982)" code of ENC Center, National Taiwan Ocean University.

Taiwan ENC's may show up in ECDIS systems with a "non-ENC" mark or indication. That is because "1U" code is listed in the third part of S-62.

When data in display are not ENC's with producer codes in the first two parts of S-62, namely "IHO Member States" and "Other States", ECDIS shall provide a

"non-ENC" indication according to the standard IEC 61174.

Such indication can be ignored in the case of Taiwan ENCs.
